

Logistics: The advantageous order management service

The solution ensures effective order management and delivery process monitoring. It comprises a web-version for dispatchers and a mobile app for couriers.

Web-version ensures effective operating procedure management

- Order placement. Create or import orders with detailed description;
- Planning and distribution. Select orders, vehicles and generate routes in a handy interface;
- Route optimization. Get preliminary routes comprising data on the estimated arrival time and mileage;
- Delivery process coordination. Receive notifications and address the emerging issues via phone calls or a chat.

Logistics Mobile

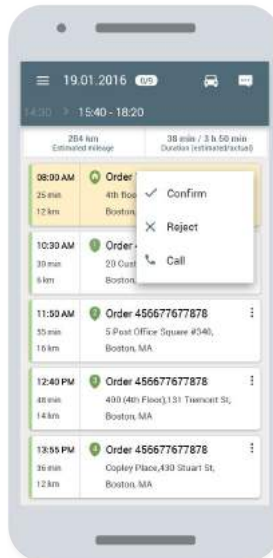

Logistics mobile app is designed for delivery men and other mobile employees

- view the list of orders with detailed information;
- track and evaluate delivery progress;
- observe orders and preliminary routes on the map;
- build a route to a delivery point with external navigation apps;
- assign order statuses, add comments and photos;
- notify dispatchers of the events and make calls to clients;
- confirm a delivery by attaching a customer signature;
- turn your smartphone into a tracker;
- receive push-notifications on orders, routes, and delivery process.

Always keep your route at hand

Send status to confirm or reject a fact of delivery
