

Logistics Mobile

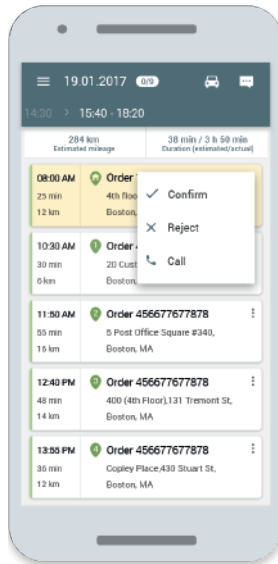

Logistics mobile app is designed for couriers and other mobile employees to offer assistance at all stages of delivery:

- view the list of orders with detailed information;
- track and evaluate delivery progress;
- observe orders and preliminary routes on the map;
- build a route to a delivery point using external navigation apps;
- assign order statuses (delivered/rejected), add comments and photos;
- notify a dispatcher of any events on the way and deal with clients on the phone;
- confirm a delivery by attaching a photo with a customer signature to an order;
- turn your smartphone into a tracker;
- receive push-notifications on orders, routes, and delivery process.

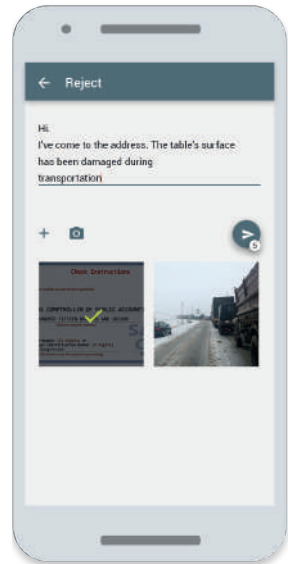

Always keep your route at hand

Send a status to confirm or reject the fact of delivery

Leave comments to insure yourself

Logistics:

Advantageous Order Management Service

The advanced Logistics service ensures effective order management and delivery process monitoring. The solution comprises a web-version for dispatchers and a mobile app for couriers.

Web version ensures effective operating procedures management

- Order placement. Create or import orders with detailed description.
- Planning and distribution. Select orders, vehicles and generate routes in a handy interface.
- Route optimization. Get preliminary routes comprising data on the estimated arrival time and mileage.
- Delivery process monitoring and coordination. Receive notifications and immediately address the emerging issues via phone calls or chatting with a driver.
