

Leverage flespi to aggregate and normalize data from a variety of IoT/telematics sources, manage devices over the air, apply custom algorithms to your real-time data, create live dashboards, and much more.

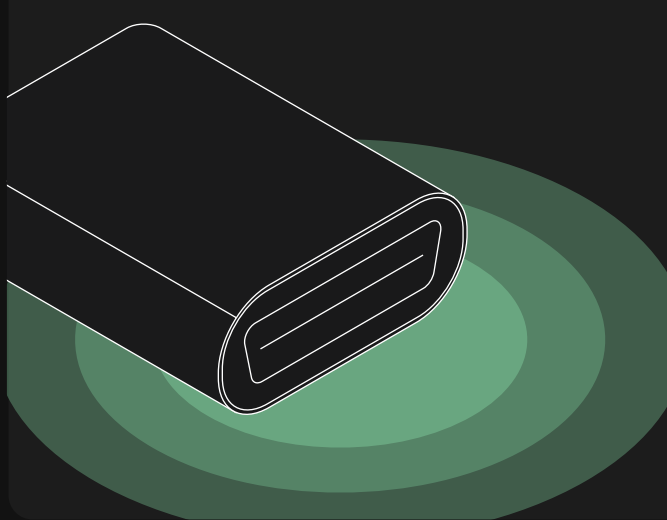

We collect data from

Telematics devices

Connect the vehicle, asset, personal, scooter, moped, bike GPS trackers from versatile manufacturers.

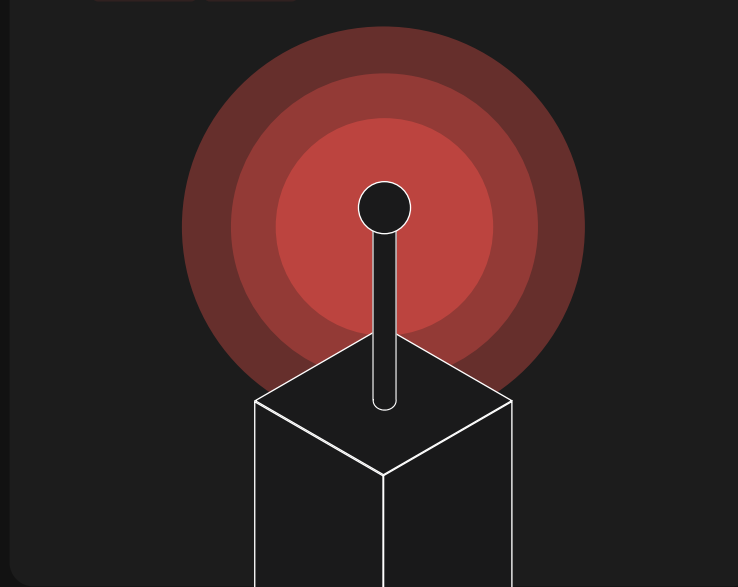

{TCP} {UDP}

IoT sensors

Add specific data from BLE tags, beacons, whatever-meters, and other sensing equipment.

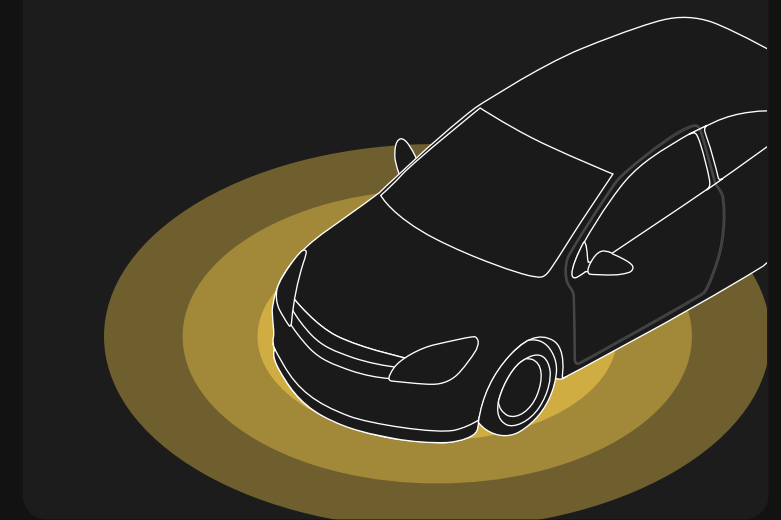

{MQTT} {HTTP}

OEM

Feed the telemetry data from the online platforms provided by various vehicle manufacturers.

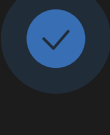

{API}

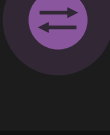

With flespi you can

- 

Ingest data

Feed the telemetry data from 650+ types of IoT and telematics devices by multiple manufacturers.
- 

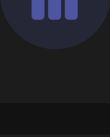

Access normalized data via API

Consume the messages in a universal JSON format with unified parameter names.
- 

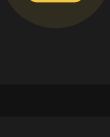

Forward data to third-party platforms

Establish data streaming to cloud hubs, fleet management platforms, IoT & telematics solutions, and more.
- 

Manage devices

Configure different IoT and telematics devices over the air via API or using a universal configuration tool.
- 

Calculate aggregated metrics

Define custom algorithms to get meaningful summaries out of hundreds of messages.
- 

Debug & troubleshoot

Use specialized tools to detect errors, diagnose connectivity issues, analyze raw traffic, and more.
- 

Visualize data

Create live dashboards to monitor key metrics in real time.

Flespi fits perfectly into versatile vertical solutions

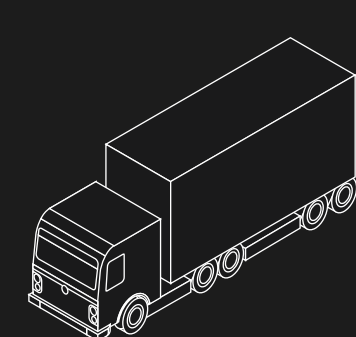

Micro-mobility services

Asset monitoring

Fleet management

Usage-based insurance
